# MACHINE-COUNTING PEARLS

**This machine is useful for the counting of various types of pearls.  
In particular is useful for the counting of pearls to be mounted on multi-wire machines.**

The machine is formed by an iron structure with a plane where there is a circular vibrator that loads the pearls into its guide.

The pearls are aligned on a raceway (guide) and they are counted with a laser while falling in the empty boxes arranged on a conveyor 2500 mm long.

The counting of the pearls that must fall into each box is programmable by an electronic panel, which is near the electrical cabin.

This machine is CE certified.

This is a simple machine, but absolutely necessary to the exact and fast counting of the pearls. It works automatically and so the operator can do other work.
